

Quiz on Functional Modeling in Object-Oriented Analysis

1. What is functional modeling primarily used for in software development?

- A. Identifying system requirements
- B. Designing user interfaces
- C. Coding the software
- D. Testing the software

✓ **Correct! Well done.**

Answer (A): Identifying system requirements

Functional modeling is primarily used to identify and define system requirements.

2. Which diagram is commonly associated with functional modeling?

correct answer is (B).

Answer (B): Use case diagram

Use case diagrams are commonly used in functional modeling to represent interactions between users and the system.

3. What does a use case represent in functional modeling?

- A. A sequence of operations
- B. A specific functionality of the system**
- C. A flow of data

Advertisement

✓ **Correct! Well done.**

Answer (B): A specific functionality of the system

A use case represents a specific functionality or behavior of the system from the user's perspective.

4. In functional modeling, what is the purpose of an activity diagram?

- A. To illustrate data flow
- B. To show the sequence of actions**
- C. To define the system architecture
- D. To model user interactions

⊗ **Incorrect. You selected (D). The correct answer is (B).**

Answer (B): To show the sequence of actions

An activity diagram is used to show the sequence of actions or activities in a process.

5. What is the significance of the 'actor' in use case modeling?

- A. It represents a part of the system
- B. It defines external entities interacting with the system**
- C. It is used for coding purposes
- D. It denotes system requirements

⊗ **Correct! Well done.**

Answer (B): It defines external entities interacting with the system

An actor represents external entities that interact with the system, such as users or other systems.

You scored 3 out of 5!
